

Server Consolidation

“Whatever type of technology our company is interested in, we always speak to Dynamix Group first. They are our IT Partner.”

- Director of IT, Manufacturing Company

SUCCESS STORY

Having only one IT employee on staff, consolidating 18 stand alone servers becomes a necessity. Through our server consolidation strategy, we cut the number of servers in half, saved the company money and took recovery time from days to under an hour.

CLIENT NEED

18 Servers ran everything from mail, print serving, and legacy applications without a comprehensive structure. Our client was desperate for a server consolidation solution.

DYNAMIX SOLUTION

Reviewing the requirements and the utilization from a process and storage perspective, Dynamix Group offered a comprehensive server consolidation strategy to its client. Now the client has one high speed tape drive with one back up procedure. If an outage occurs the client is down for an hour or two of as opposed to two or three days. With 8 servers connected to the iSeries - Dynamix Group created simplification from the management standpoint. One system, not many incongruous systems!

THE RESULT

A server system that our client manages instead of it managing him!

PRODUCTS/SERVICES

- IBM eServer i5
- Dynamix Group Alliance Partner
