

Server Consolidation

“Whatever type of technology our company is interested in, we always speak to Dynamix Group first. They are our IT Partner.”

- Director of IT, Manufacturing Company

SUCCESS STORY

Dynamix Group increased overall workload performance by 35% when they quickly and seamlessly consolidated 30 servers to 10 IBM servers for a large truck manufacturer. The transition was a triumph!

CLIENT NEED

The IT facility of a large international truck manufacturer supports all of the retail and maintenance locations across the United States with a number of mission critical applications needed for day to day operation. The facility ran 30 separate servers, creating a maintenance and support nightmare. Dynamix Group partnered with the client to develop a server consolidation solution.

DYNAMIX SOLUTION

Dynamix Group took 30 servers and consolidated them into five while increasing workload performance by 35%. The transition was straightforward because the IBM servers run WebSphere, Oracle and DB2 natively. The transition was completed with minimal disruption to the customer's environment.

THE RESULT

A model automotive IT Group

PRODUCTS/SERVICES

- IBM eServer p5
- IBM TotalStorage
- Dynamix Group Technical Services
