

IT Infrastructure Simplification

“Whatever type of technology our company is interested in, we always speak to Dynamix Group first. They are our IT Partner.”

- Director of IT, Manufacturing Company

SUCCESS STORY

From multiple systems supporting 21 manufacturing facilities to one system with 21 partitions with room to spare, while speeding up communication between the plants - Dynamix Group calls it Infrastructure Simplification our client calls it: peace of mind.

CLIENT NEED

For a \$4 billion dollar manufacturing company, 21 manufacturing facilities being supported on multiple servers meant a slow response time for communications among servers. Not only were the overall systems operations sluggish, but the maintenance and cost of upgrades was excessively expensive.

DYNAMIX SOLUTION

Dynamix Group took 21 servers and consolidated them into one. The consolidation increased communication time and decreased company spending. The iSeries has 21 different logical partitions which run each of their manufacturing sites. Now one site can power up or down and without affecting the other sites. The communication time between the sites is lightning fast because they can communicate without data ever leaving the server. When a software upgrade is required; our client pays one time as opposed to 21 times.

THE RESULT

Less equals more for this manufacturing mogul.
