

IT Infrastructure Simplification

“Dynamix Group gave us multiple scenarios and saved us hundreds of thousands of dollars. They not only plan for our current requirements but also help us look towards our future.”

- Director of IT, Freight Company

SUCCESS STORY

Saved time, money and manpower for a time-critical freight company.

CLIENT NEED

When your business is time-critical and your customers expect no less, downtime is unacceptable. The infrastructure consolidation and application modernization project needed to be well planned and carefully implemented so the freight company could be prepared for every possible scenario.

DYNAMIX GROUP SOLUTION

A major driver for the company was cost but equally as important was guaranteeing next to no downtime. Dynamix Group recommended moving everything from the freight company's IBM System i820 and i825 to a single System i550 and at the same time putting a partition on the i550 to run high availability (HA). If there is a disaster the freight company can literally unhook the HA from the server rack, and move it to their off-site location requiring no further system equipment except for a cart and another rack. The end users don't even notice a difference and the down-time is next to nothing. Dynamix Group took this complex scenario and created a simple solution that saves time, money and manpower for one of America's leading freight companies.

THE RESULT

Critical business applications are continually available even with unplanned downtime.

PRODUCTS/SERVICES

- IBM System i550
- Vision Solutions – MIMIX High Availability
- Dynamix Group Technical Services
